

Seattle's Central Waterfront Plan Charrette 2004

Department of Planning and Development
City of Seattle, Greg Nickels, Mayor

econnections

Create a waterfront that is a feeding,
resting, and connectivity zone for
people and critters

TEAM 19

Team Narrative

Team 19: econnections

Econnections designed a “waterfront that is a feeding, resting and connectivity zone for people and critters.”

At the north end of the study area, a series of green fingers will draw people from Belltown and the Seattle Center to the new waterfront made active, dense and vibrant with infill development and new public attractions.

Along the south end, a pedestrian circulator carries people from Pioneer Square and SoDo over a channel to the former Terminal 46, now the site of the ferry terminal and a new neighborhood. This channel and a series of modular, floating eelgrass platforms will help migrating salmon make it to sea safely. At Pike Place Market, a series of ramps will zig and zag through glades of trees to a tidal basin that can be used for economic, educational and environmental benefits.
